

COMMUNITY TRAIL REPORT

March, 2016.

A very wet winter has seen the community trail under standing and even running water for much of the time. This has resulted in considerable erosion in a few places, lots of standing water, and a well established mudhole. On checking the trail out this week it is drying out but there is still much in the way of puddles, mud, and even yet some running water. Hopefully the weather will dry up a bit to allow better access and the opportunity to make some improvements.

Respectfully submitted,

A. Keir.
